DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on August 22, 2006 has been entered.

Claim Rejections - 35 USC § 102

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
3. Claims 9-17 continue to be rejected under 35 U.S.C. 102(b) as being anticipated by Nagai et al. (5,863,311) for the same reasons as presented in Paragraph 4 of the Office Action dated March 17, 2006.

With regard to the newly added limitations to claims 9, 12, and 15, the flow-through channels (4) of Nagai et al. have exhaust gas which flows through without flowing through a barrier or wall which traps particulates and the wall-flow through channels (3) are channels which exhaust gas flows and exits (into the flow-through channels) by crossing a barrier or wall (5) which traps particulates and is in an inserted position in the flow-through channels (see figures 4-6).

Double Patenting

4. Claims 9-17 continue to be rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-19 of U.S. Patent No. 6,669,913 for the same reasons as presented in Paragraph 6 of the Office Action dated March 17, 2006.

Allowable Subject Matter

5. Claims 91-94 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The following is a statement of reasons for the indication of allowable subject matter: The prior art neither teaches nor suggests the three sheet arrangement, as recited in claims 91 and 93, wherein the second sheet pleats form axially extending flow channels and the third sheet pleats with bend lines extending transversely to the axis and a first sheet.

Response to Arguments

35 USC 112

The rejection of claims 91-94 under 35 USC 112, second paragraph is withdrawn due to applicant's arguments.

35 USC 102

Applicant argues that Nagai has only wall-flow channels and not flow-through channels as presently claimed.

Art Unit: 1764

The examiner respectfully disagrees, and as discussed above, the flow-through channels (4) of Nagai et al. have exhaust gas which flows through without flowing through a barrier or wall which traps particulates and the wall-flow through channels (3) are channels which exhaust gas flows and exits (into the flow-through channels) by crossing a barrier or wall (5) which traps particulates and is in an inserted position in the flow-through channels (see figures 4-6).
